

## The remote control for the Peugeot 206 CC

### What is Remote Roof Easy ?

With a 4-channel remote control you can open the already unlocked roof and the windows within a range of 20 meters. The roof will only open or close as long as the button of the remote control is pushed, this means that the security measures are functional. The modul will be installed unvisible in the trunk of the 206 CC. The Remote Roof Easy (RRE) can be installed in all 206 CC models.

### Functions :

- Pushbutton 1: Opens all windows and opens the roof – as long as the button is pressed
- Pushbutton 2: Closes the roof – as long as the button is pressed
- Pushbutton 3: Closes all windows - as long as the button is pressed
- Pushbutton 4: Own option to turn on / off something (e.g. lights)
- A switch under the rear bench to turn on / off the RRE function

### How will the module be installed ?

The module will be placed in the trunk under the cover near the roof controller. The RRE module needs a grounding and a 12V power source. In the trunk two power cables have to be cut and an additional wiring harness needs to be inserted. Installation time: appr 1h.

Further details at [www.ccfreunde.de/rrxl](http://www.ccfreunde.de/rrxl) in the internet.

### Safety reference and helpful information:

- Use the remote control only in sight of your car.
- Basic knowledge of electronic installation and the usage of an AMP crimp tool are necessary.
- The usage of the RRE can cause the loss of the car warranty and the operating permit.
- The usage can conflict with state or government laws concerning the operation of a vehicle.
- The usage is strictly on own risk ! There is no liability for person / material damages !
