

The speedy enhancement for the Peugeot 206 CC

What is a Speed20/30 modul ?

Coming out of the production plant the opening and closing of the hard-top of the 206 CC is only possible while driving under 10 km/h (7 mph). But sometimes it would be more practical to open or close the hard-top up to a speed of 20 or 30 km/h . Now with the Speed20/30 module you have the control to open or close your hard-top up to the limit of 20 or 30 km/h. Speed20/30 can be installed in all 206 CC models.

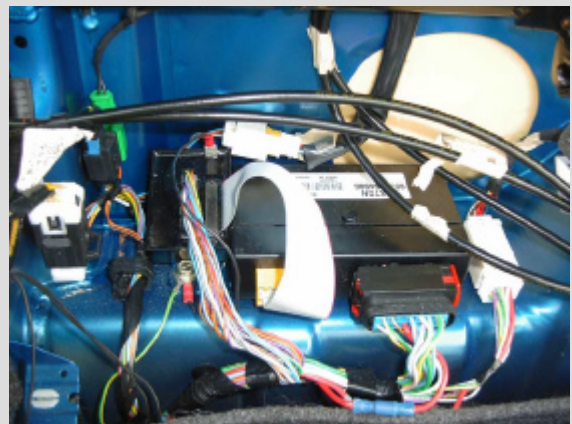

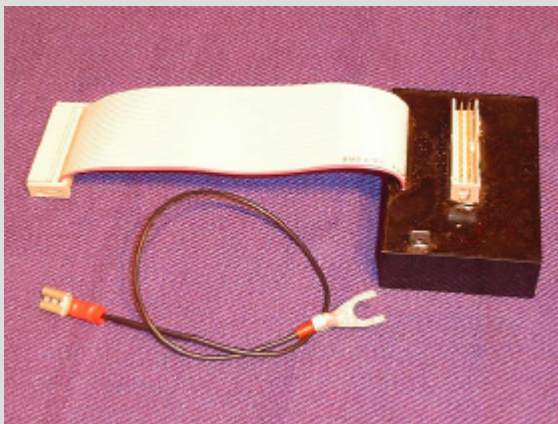

Characteristics :

- Open / close hard-top up to a speed of 20 or 30 km/h (7 mph).
- The security measures are functional – the roof stops working at higher speeds than 20 / 30 km/h
- Easy installation
- After installation not visible
- Deinstallation without any remainders
- 2 years warranty on the functionality of the module.

How will the modul be installed ?

The modul will be placed in the trunk under the cover near the roof control. No cables have to be cut. The Speed 20 / 30 module needs a grounding which is available next to the roof control. The duration of the installation will take appr. 15 min and can be done very easily. You don't need special tools for the installation.
